

# THE BUSSY BEES

During a picnic, Fizza and Ahmed noticed bees buzzing around flowers

Ahmed was afraid, but Fizza explained how bees help pollinate plants and produce food. They decided to plant more flowers at home to support them

They visited the local library and read about the importance of bees in agriculture and how declining bee populations threaten food security

Encouraged by their newfound knowledge,  
they started a bee-friendly garden at  
school, planting a variety of flowers that  
attract bees

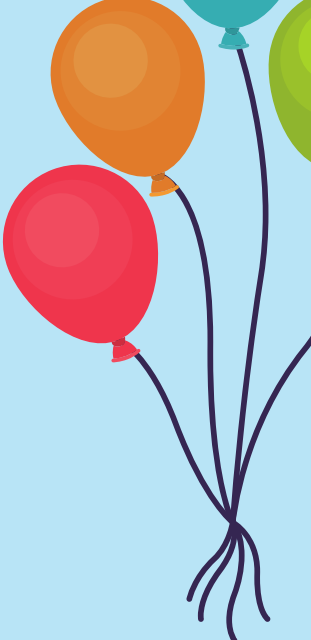

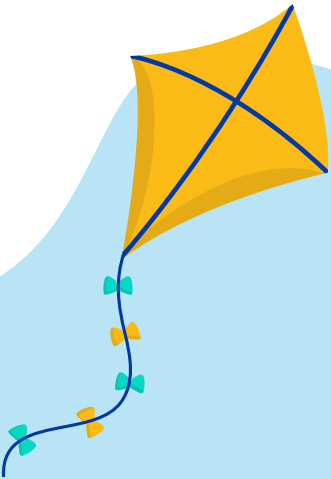

They also educated their classmates on how to coexist with bees safely and how to avoid harmful pesticides.

Within months, their garden buzzed with activity, and they even saw an increase in fruit yield in their school garden. Lesson: Pollinators like bees are crucial for our ecosystem.

# MORAL

Pollinators like bees play a vital role in maintaining ecosystems and food security, and small efforts to support them can make a big difference.
